

Science in Blissymbolics

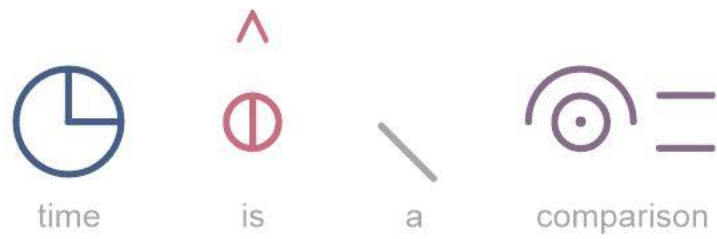

Relativity

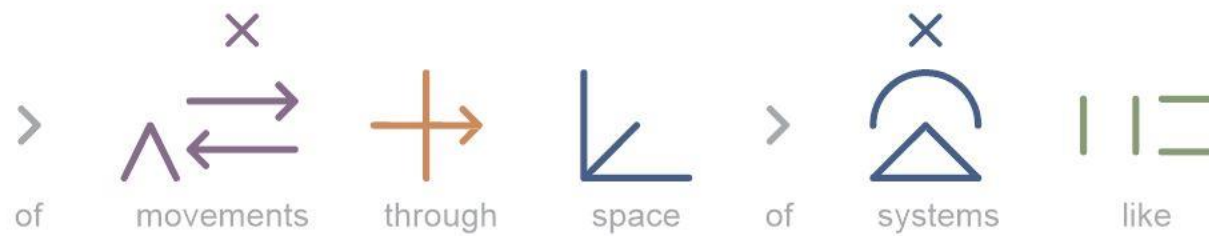

how you like the blissymbol above representing Einstein's

idea about time and space being similar

time is a comparison

of movements through space of systems like

      
the moon around the earth with the

    .
earth around the sun

       
the moon circles the earth about twelve times

       .
as the earth circles the sun once

 this
  comparison
  gives
  us
  the
  ideas
  of

 month
  and
  year
 

the earth spins 28 times while the moon

orbits earth once .

the idea of a day .

the only units of measurement here are spatial

therefore time is defined by

units of space
