

HUMAN PERCEPTION OF TIME'S FLOW AND THE QUARK WRITE/READ HEADS

Ding Dang Mee

<https://www.youtube.com/watch?v=wo0ospGvxXc>

as you watch the youtube video of the Ding Dang Song above, **where is the real you who is perceiving the action and hearing the song?** as the couple dances to the rhythm of the music moving around to and fro, time seems to flow to that rhythm. **does time have rhythm? does it flow? do you have a soul outside of time and space experiencing time and space? is there a part of you that is absolutely still so you can perceive rhythm and motion?**

let's answer those questions if we can:

the neutrons and protons in all your atoms read and write to magnetic thread like magnetic tape in a VCR. neutrons and protons are the tape heads and cosmic magnetic thread is written to as you have experiences. that's right, a cosmic recording is made of all the experiences you

have in time and space. when you sleep at night all the day's memories are processed and integrated with your past, your wishes, hopes and fears and mashed into meaningful movie clips and written to the magnetic thread as alternate timeline clips for you and stored forever as your soul in your protons and the magnetic thread. but that is the end of the story. where does the story begin?

just as light passes through the cornea, pupil and lens of your eyes and focuses on the retina, and then travels down the optic nerve, all the **information of space and time** around you enters the **electron funnels** of all your atoms and the flow of that superfluid space-time is life's movie being composed on the fly and experienced by you at the **mouth of your electron funnels, the tops of the curved purple lines** in the diagram above right, the entry point to the inner world of your atom vortices. only a nano second or so after you experience moments of space and time entering your **electron funnels** they reach the quark heads and are converted by the quarks into magnetic thread. cosmic strings. the magnetic thread itself is made of pre-quark units of pure magnetism shaped like toroids, the first stuff the cosmos created long before the big bang.

below you can see the visual similarity of electron orbitals and the diagram i am using to explain this. the carbon atom, the atom of organic life, has **six electron funnels** which are the outer spouts of the **six protons** in the nucleus.

The atomic number or proton number of a chemical element is the number of protons found in the nucleus of an atom. It is identical to the charge number of the nucleus. The atomic number uniquely identifies a chemical element. In an uncharged atom, the atomic number is also equal to the number of electrons.

the quarks in the protons are the write heads which record your actual timeline and also your dreams onto cosmic magnetic thread. the protons also have local records on their inner event horizons. the neutrons are the read heads for playing back records from your protons. there are literally trillions times trillions of copies of you and your history and alternate histories because you have that many atoms. they are all entangled into a single you. there is only one you but trillions of backup copies all slightly different. because they are entangled you will not come apart if your body does. the magnetic thread belongs to the universe and it is the universe's thread which keeps you entangled together as a soul forever. it is indestructible because it is the first thing the cosmos weaved from pre-quark magnetic toroids from the original cosmic superfluid. your protons are the most stable entities in the universe and are expected to exist many many times the life of universes, probably forever. in any case, you also exist in the unified magnetic thread of the cosmos which is eternal and thus so are you.

when you are not in a body and thus have no write/read heads, the cosmic thread slides through your entangled protons wherever they are in the universe giving you playback experiences. this entire concept derives from DarSeFT (dark superfluid theory).

the shape of universes in the cosmos has the same funnel forms as atoms and there may be as many universe cluster types as there are elements on the periodic table, but who knows? it may be that a six universe cluster is more friendly to carbon based life since its overall resonances might help the carbon pattern.
